

NHBC Compliance Statement – CE Marking Status

Adjustable Metal Pattress / Adjustable Bracket Pattress

The Adjustable Metal Pattress is an ancillary steel backing component intended for installation within internal non-load-bearing stud partition walls to provide local fixing support for wall-mounted fixtures such as kitchen units, radiators, sanitaryware, cabinets and similar fittings.

The product is **not a structural element** and does not contribute to the primary load-bearing function of the building. It is concealed behind plasterboard linings and serves only as a local reinforcement to support fixings applied through the wall lining.

The Adjustable Metal Pattress is **not covered by a harmonised European Standard (hEN) or UK designated standard** under Regulation (EU) No.305/2011 (Construction Products Regulation), as retained in Great Britain. It is therefore **outside the scope of mandatory CE marking and Declaration of Performance (DoP) requirements.**

Accordingly, **CE marking is not required** for this product.

The product is manufactured from pre-galvanised steel in accordance with relevant material standards and is supplied as an ancillary construction accessory. It is intended to be used in conjunction with compliant wall systems, fixings and finishes that satisfy NHBC Standards and the applicable Building Regulations. Installation shall be carried out in accordance with the manufacturer's instructions and the relevant NHBC technical requirements.
